Education

University of California, San Diego

Master of Science in Computer Engineering

Sept 2024 – Dec 2025

Bachelor of Science

Sept 2020 – Aug 2024

Double Major in Computer Engineering and Cognitive Science Design & Interaction

- GPA: 3.74/4.0
- **Coursework:** Data Structure and Object-Oriented Design, Computer Operating Systems, Algorithm Design
- **Programming Languages:** Python, C/C++ , Java, Javascript, HTML, CSS, SystemVerilog, ARM Assembly
- **Technical Skills:** AWS, Git, Linux, React, Node.js, MySQL, PyTorch, NumPy, Pandas, OpenGL, Blender, Figma, Unity, Latex

Work Experience

Gistar Tech - a leading provider of biology experiment materials

San Diego, CA

Software Engineer Intern

July 2024 – Sep 2024

- Developed key features for a Lab Management System using PHP, including an interactive dashboard, real-time statistical charts, and essential database functions.
- Technical Highlights:
 - Built a dynamic dashboard interface using PHP, HTML, and JavaScript to display lab metrics.
 - Optimized MySQL queries for efficient data retrieval and management across the system.
 - Integrated AJAX and Google Charts to enable real-time, scalable visualization of monthly revenue.
- Reduced lab managers' workload by 10–15 hours per month through automated revenue tracking and earned recognition from the lab leader.

Projects

“UC Social Den” - UCSD Student Social Platform

Github Repo

- Built a campus social platform for UCSD students to create, join, and engage with events.
- Implemented event detail pages and interactive join functionality with real-time feedback, enabling seamless user participation and backend integration.
- Designed responsive UI/UX for both mobile and desktop, while resolving layout and feedback issues through cross-functional debugging.
- Delivered a secure, fully functional platform that supports on-campus event organization and fosters student connections online.

AI Lyrics Generator in Taylor Swift Style

Github Repo

- Developed a machine learning model (decoder-only transformer) to generate song lyrics in Taylor Swift's style.
- Preprocessed a dataset of Taylor Swift's lyrics, using GPT-2 subword tokenization for better performance over character-level tokenization.
- Built and trained a GPT-2-like transformer, optimizing hyperparameters for stylistic accuracy.
- Generated creative, nuanced lyrics, achieving a project score of 96/100.

“Palm & Prophecy” - Fortune Teller Website

Github Repo

- Developed a fortune-telling website with palm reading, fortune cookies, and zodiac matching.
- Designed a user-focused website prototype and interactive UI in Figma.
- Built the palm-reading page structure in HTML and CSS with a teammate.
- Created a JavaScript function for random fortune generation, adding interactivity.
- Awarded a medal of recognition by the professor for being among the top 5 winning teams out of 20.
